DTP3 Aluminium Skid with Solar Frame, 4m Winch-Raised AL340 Tower, Expanded Mesh Floor

AP-DTP3SK-EMF-ASF2-AL340-4

Key Features

- Winch-raised AL340 tower, 4, 7 or 10 metres
- DTP3 aluminium skid, expanded mesh or GRP floor
- Two-panel tilting solar frame, stows vertical for transport
- Range of enclosures available

Overview

This aluminium skid carries a winch-raised AL340 lattice tower with its own solar frame. It is built on APAC's DTP3SK skid base module: a welded aluminium frame with a 3000 x 1750 mm deck, designed to be fork-lifted via its closed fork pockets, or lifted/dragged from its lifting and pulling lugs. Bolt-together tower modules mean the entire system packs down tight and transports with a small trailer.

The aluminium design allows us to rapidly manufacture these skids, helping you meet tough project timelines.

The standard design has a two-panel tilting solar frame that stows vertical for transport, and mounting positions on the DTP3 grid suitable for a range of field cabinets and enclosures. It is supplied standard with aluminium expanded mesh flooring, with GRP anti-slip flooring also available.

Operation of the AL340 lattice tower is straight forward - a 1.2 tonne hand winch and gin-pole system provides for the safe raising and lowering of the tower. The 4 metre tower is the AL340 base module; the 7 and 10 metre add one or two 3.1 m sections.
